Web Technology

Prototype Responsive Front-End Website – Bootstrap 5

Introduction

This project involves the development of a minimal responsive corporate website prototype using Bootstrap 5 via CDN. The selected theme is **Startup / Corporate Services**. The objective was to design a structured, responsive layout with navigation, content sections, and a validated contact form, and deploy it using a local server.

Requirements Implemented

- Responsive navigation menu
- Header (Hero section)
- Main content area
- Sidebar section
- Footer
- 4 pages (Home, About, Services, Contact)
- Maximum 3 JPG images
- Contact form with Name and Email validation

Tools & Technologies

- HTML5, CSS3
- Bootstrap 5 (CDN)
- JavaScript (form validation)
- XAMPP (Apache server)
- Visual Studio Code
- Git and GitHub

Development Steps

1. Created project folder structure.
2. Integrated Bootstrap CDN.
3. Designed responsive layout using grid system.

4. Implemented navigation and multi-page linking.
5. Added images and structured content sections.
6. Developed contact form with Bootstrap validation.
7. Deployed project inside XAMPP *htdocs* and accessed via:
   `http://localhost/project_folder_name`

Features

- Fully responsive design
- Grid-based layout
- Multi-page navigation
- Client-side form validation using HTML5 and Bootstrap
- Required field and email format validation
- Local deployment using XAMPP

Conclusion

The website meets all specified requirements. It demonstrates practical implementation of Bootstrap 5, responsive web design principles, and deployment using a local Apache server.
